iMstrument se sastoji od snimljenih zvučnih i video sekvenci koje izvode različiti muzičari koji razvijaju svoj pojedinačni muzički jezik. Korisnik može stvarati muziku odabirom izvora, definisanjem jačine i slučajnosti, što stvara kontinuiranu i neponovljivu kompoziciju. iMstrument je kreacija koja se stalno razvija, kombinujući originalnu i živu muziku. To se događa na preseku tehnološki obrađene savremene zvučnosti i elementarnosti čistih zvukova u vezi s digitalizovanim snimanjem. To je mesto susreta odsutnih tehnološki reprodukovanih izvođača i neposrednog prisustva korisnika.

iMstrument consists of recorded sound and video sequences performed by different musicians developing their individual musical language. The user can make music by selecting the source, defining volume and randomness, which generates a continuous and unrepeatable composition. *iMstrument* is a continuously evolving creation, combining original and live music. It is taking place at the intersection of technologically processed contemporary sonority and the elementarity of clean sounds in connection with digitized recording. It is a meeting place of the absent technologically reproduced performers and the immediate presence of the user.
